2.	Data Preprocessing	1. Removed the index column			
		→ It was just a row ID.			
		2. Renamed fields			
		→ Example: Number of Manufacturers was renamed to Manufacturers for cleaner axis labels.			
		<ul><li>3. Converted Year to date</li><li>→ Created a calculated field: DATE(DATESTR([Year])) to</li></ul>			
		enable timeline charts.			
		4. Created hierarchy			
		→ Dragged State into Year to enable drill-down by time per			
		state.			
		<ul> <li>5. Added filters</li> <li>→ Used filters for State or Year for better dashboard interactivity.</li> </ul>			
		6. Grouped smaller states into "Others"			
		<ul><li>→ This helped produce clearer visuals.</li><li>7. Sorted by value</li></ul>			
		→ Sorted bar charts by manufacturer count to quickly			
		highlight high-value states.
