2.	Data Preprocessing	1. Removed the index column
		→ It was just a row ID.
		2. Renamed fields
		→ Example: Number of Manufacturers was renamed to
		Manufacturers for cleaner axis labels.
		3. Converted Year to date
		→ Created a calculated field: DATE(DATESTR([Year])) to
		enable timeline charts.
		4. Created hierarchy
		→ Dragged State into Year to enable drill-down by time per
		state.
		5. Added filters
		→ Used filters for State or Year for better dashboard
		interactivity.
		6. Grouped smaller states into "Others"
		→ This helped produce clearer visuals.
		7. Sorted by value
		→ Sorted bar charts by manufacturer count to quickly
		highlight high-value states.
